DRAFT

## **Introduction and Background**

Pursuant to A.R.S. §45-2452(A), the Arizona Water Banking Authority (AWBA) was required to develop a Storage Facility Inventory (Inventory) of all existing storage facilities in Arizona prior to March 1, 1997. The purpose of the Inventory was "...to determine whether storage facilities exist in this state to meet the water storage needs of the authority for the following ten years" (A.R.S. §45-2452(D)). Pursuant to A.R.S. §45-2452(F), the AWBA is required to update the Inventory at least once every five years. In addition to meeting the mandatory update requirement, the Storage and Interstate Release Agreement (SIRA) requires identification of recharge facilities in the Inventory prior to the AWBA utilizing those facilities for interstate water storage. According to the most current Ten-Year Plan, the AWBA does not expect to conduct interstate water storage at least through 2026.

Inclusion of a facility in the Inventory does not require the specific use of such facility in the future. The AWBA will continue to determine which facilities will be used through its Annual Plan of Operation. Similarly, excluding a facility from the Inventory does not preclude the AWBA from utilizing that facility in the future.

The availability of storage capacity at permitted recharge facilities is one important factor affecting the AWBA's ability to store water. When planning to store water, the AWBA must also consider the availability of water and funding. The availability of one, or lack thereof, affects the significance of the other. For example, if there is no water available to the AWBA, the availability of storage capacity is not relevant. Similarly, when water is available for storage but the funding needed to store that water is limited, the volume of storage capacity becomes less relevant.

Future limitations on both water availability and funding availability are likely to reduce the AWBA's need for storage capacity. As a result of both exceptionally dry conditions and the additional conservation requirements under the Lower Basin Drought Contingency Plan (LBDCP), the AWBA is not expected to have excess CAP water available during the next ten years. However, the AWBA could store CAP water that is turned back during the year and/or may also store water on behalf of others. In the event CAP water turned back during the year becomes available, funding limitations may still limit the AWBA's ability to store that water, particularly in the Pinal and Tucson AMAs. As a component of the LBDCP, withdrawal fees levied in the Pinal AMA during calendar years 2020 through 2026 will not be made available to the AWBA for water storage purposes.

## Recharge Facilities Used by AWBA

The AWBA currently holds or has held water storage permits at 29 recharge facilities<sup>1</sup>. Those facilities have a cumulative capacity of over 1.5 million acre-feet. Of the 1.5 million acre-feet of capacity, approximately 815,000 acre-feet of capacity is located in the Phoenix AMA, 378,000 acre-feet in the Pinal AMA and nearly 300,000 acre-feet in the Tucson AMA. Table 1 on the following page shows the capacity permitted for all recharge projects by AMA where the AWBA has held or continues to hold a permit to store water. Of these facilities where the AWBA has permits, there are three where the AWBA has never stored water: 1) Hassayampa Recharge Facility, 2) Kai Farms Avra Valley and 3) Vidler Water Company Recharge Project. Moreover, some of these facilities are no longer permitted or not operational as facilities. In some cases, the AWBA has opted not to renew an expired storage permit because of a lack of storage capacity available to the AWBA at the facility. Storage facilities in Table 1 are highlighted in green if they are actively used by the AWBA today.

In addition to the AWBA water storage, facility operators and other recharge partners also store CAP water at these facilities. The AWBA plans for certain volumes of storage capacity at each facility. However, actual capacity available to the AWBA in any given year is subject to facility operation as well as the volume of storage capacity used by others. CAWCD operates six recharge projects, where the AWBA has stored water, with a total capacity of approximately 300,000 acre-feet. Under CAWCD's policy, when storage requests exceed the capacity available, the AWBA receives the same priority as others with statutory firming obligations.

According to the most recent Ten-Year Plan<sup>2</sup>, approximately 293,500 acre-feet of capacity is available to the AWBA at recharge facilities where the AWBA currently stores water. Of the 293,500 acre-feet, approximately 126,500 acre-feet is located in the Phoenix AMA, 140,000 acre-feet of capacity is located in the Pinal AMA and just over 27,000 acre-feet is located in the Tucson AMA. The details for all these facilities can be found in Appendix A to this Inventory.

Through 2021, the total balance of credits accrued by the AWBA through water storage is 4,213,261 acre-feet including 3,599,415 acre-feet for Arizona uses and 613,846 acre-feet of credits for interstate banking purposes. In the Phoenix AMA, the total cumulative balance is 1,930,432 acre-feet including 62,021 acre-feet for interstate banking. In the Pinal AMA, the total cumulative balance is 1,490,394 acre-feet including 440,241 acre-feet for interstate banking. Finally, in the Tucson AMA, the total cumulative

---

<sup>1</sup> The Gila River Indian Irrigation and Drainage District (GRIIDD) GSF has held permits for the Phoenix AMA and Pinal AMA, as the boundaries of the District crossed the AMA boundary. The GRIIDD no longer holds permits.

<sup>2</sup> Annual Report. (2020) Arizona Water Banking Authority, Appendix D.

balance is 792,435 acre-feet including 113,584 acre-feet for interstate banking. Table 2 on page 4 identifies the total volume of credits accrued by the AWBA through water storage at individual storage facilities within each AMA. Although the AWBA has also accrued credits through other means such as purchases, those credits were not included in the total since they are not relevant to the analysis for determining storage capacity needs.

<sup>1</sup> Does not include credits purchased by the AWBA.

## **Additional Recharge Projects Not Used by AWBA**

In addition to facilities where the AWBA currently stores, there are another 79 permitted recharge facilities in the Phoenix, Pinal and Tucson AMAs with a total capacity of around 586,000 acre-feet. Detailed information about these facilities is available in Appendix B to this Inventory.

## **Conclusion**

To determine whether enough storage capacity is available to meet the AWBA's water storage needs, the available facility capacity is compared to volume of water anticipated for storage. According to the most recent Ten-Year Plan, approximately 293,500 acre-feet of capacity is available at the recharge facilities where the AWBA currently stores water. However, the AWBA does currently anticipate water will be available for storage during the next ten years.
